Алгоритм удаления expired nodes

- Каждый холдер каждый тик делает
  - mark ephemeral nodes with time elapsed since last activity
    - N seconds without update
  - check - quorum should agree that the node is expired
    - timestamp should match quorum opinion (синхрон точного времени)
  - mark expired - to avoid race conditions with mark, etc.
  - delete node with all references

- Репортить аномалии
  - timestamp в будущем от точного времени (± 30 sec)
  - mark не совпадает с сигналом по delete / expired
  - someone marked me expired, but I'm ok

- When one or more ephemeral nodes expire, it can trigger execution of some logic e.g. entity status change
